Accenture Technology – Leeds

Proficient languages: JS, Python

I am a full stack engineer experienced in back-end development and building API's

In 2022 I underwent a significant career transition from a culinary background to a role in the technology sector. I taught myself the basics of programming before completing a bootcamp at Northcoders and then joined the IW academy.

My combination of culinary and tech experiences have taught me about precision, adaptability and the ability to thrive in fast-paced environments.

Over the past year, I have taken pride in contributing to the healthcare sector by working on the NHS API platform.

My career aspirations revolve around honing my experience in cloud technologies and backend development. I am committed to advancing my skills in cloud computing platforms, such as AWS, Azure, or GCP to create scalable and efficient solutions as well as becoming a proficient backend developer specialized in cloud-native applications.

Industry experience

- **Healthcare – NHS England**
 - Digital Onboarding System
 - API development
 - Producer and Consumer Support

Relevant experience

Full Stack Engineer, NHS England

- Developing a front-end service allowing users to onboard applications to access the platforms API's
- Feature development such as allowing role transitions within the platform, granting the ability to adapt the user's privileges
- Developing and maintaining APIs with Apigee
- Running stand ups, retros and presenting live demos to clients
- Deploying AWS services with terraform using infrastructure as code
- Tech Stack: Python, C#, Typescript, Terraform, Lambda, DynamoDb

IW Academy

- Full stack training in React and Javascript to build an online multiplayer game
- Consultancy based training focused on fostering good client relationships
- Using AWS resources and CDK deployments to host an online game game
- Group presentation of our final game to IW employees
